Robert

Thank you for asking me to submit a bid on the new fire truck. I have attached specification so you can see the complete build. I substituted the upfitter interface module with fire service fire service emissions and operator command regeneration, the upfitter module is for elevating engine speed for hydraulic pump operations, you will still have the 6 upfitter switches to hook up six extra 12 volt circuits.

The city price will be \$44,892.00
